

Inuit is a new range of uncoated papers which comes in two different finishes, three different shades, and nine different weights. It is FSC certified, and manufactured to the highest environmental standards, using only elemental chlorine-free pulps sourced from well-managed forests.

Inuit prints beautifully, folds easily, and takes special processes like blind embossing and foil blocking in its stride. Which makes it the perfect choice for direct mail, report and accounts, corporate communications, and many other promotional print applications.
